: I recently purchased this dual band mobile and discovered a problem
: which I felt must be a defect. I tried to return it to the dealer, who
: responded that all-of-em do this...
: The problem is that when listening to a station on 440, anytime the
: channel changes on 2mtrs, you get a rather loud click in the speaker.

What are you talking about? How would the "channel" (I assume you mean
"frequency") change on 2M if you are listening to 440? Is the 2M side
in "scan" mode? I want to see if mine does this so that I can help you

out. I've never noticed a loud click at any time, and I have had one side scanning while listening to a QSO on the other band.

There is a BEEP feature available whenever you change frequencies but it has an adjustable volume, is that what you may be hearing?

73 Hope I can help you out, your dealer sounds like a real jerk, just like our local guy, it's an attitude problem that develops because the japanese don't allow any local competition once a dealer is established in an area.

Subject: HELP!! Looking for info on Kenwood TR-7625
To: ham-equip@ucsd.edu

I purchased a Kenwood TR-7625 at Auction. It is a synthesized 2M rig, and is working. I need a manual for it. Looks like it was built between 1975 and 1980. It has no DTMF, and I would like to have suggestions on a microphone with a DTMF pad and encoder I could put on the radio. The microphone connector is a five pin style. I called Kenwood, they have no manuals and have no suggestions on where to go for help.

To any who have a manual, I will gladly pay costs for photocopying, etc. Thanks much for your time. Maybe I can return the favor to you some day.

MaryMac is one...800-231-3680 / 713-392-0747 in Katy, TX. They discount everything in the RS catalog...so when RS has a sale, so does MaryMac (last I saw, the HTX404, the 440 version, was on sale by RS at \$228.88 and MaryMac had it on sale for \$209 and some change.)

Have the fortune (or misfortune) to have in my hands an ICOM 720A HF rig.. Nice if it was working, BUT it was given to me in a box just like a kit.. Have got all of the pieces, some not in too good a condition, but I am going to get it back to working state with a great deal of time going to be spent on it.. If you have a manual (service) that you would be willing to part with, or an old IC720A no matter what condition it is in that I may be able to rescue some bits and pieces from a reply would be greatly appreciated..
THANKS in advance for any possible help..

To: ham-equip@ucsd.edu

Have recently obtained an ICOM 720A HF tranceiver, in a box ,(literally) in pieces !! I am of the mind to make it work again, but need a manual not the owners manual, BUT the SERVICE manual with all the drawings and proper laces for all the little wires etc..
Have sofar repaired some very VERY VERY bad sloppy soldering and repaired one board which was broken in two pieces...

ANY help with manual , or another old one, regardless of condition would be greatly appreciated

Ham radio: N09E, SP8FWB

Hi Ignacy, nice to work you on 40 a couple of weeks ago. By now, you should have the QSL card. So, I take it you have purchased the Radio Shack DSP filter and were not too happy with it? Like the original poster, I was all set to buy a Timewave DSP 9, until I heard of the Radio Shack device. But it sounds as if the DSP 9 might be worth the extra money.
